

# AZCO CORP.'S INNOVATIVE BLISTER CUTTER

A cost-effective solution that eliminates the need for a punch station.

AZCO Corporation

**AZCO Corporation** has come up with an innovative way to provide different size blister cards without the need of expensive tooling or long costly change overs. A module unit easily integrates with any blister machine. Material enters the unit as a continuous web, and shear cut slitters slit the material to the proper width. Side trim can be removed. An optic sensor tracks the blister so cross cuts are in the proper location.

## Key Features and Benefits:

- **Easy Installation:** Unit is free standing. Place into position, plug into 110VAC/220VAC, and connect an airline. No integration required.
- **Toolless Changeover:** Slide the slitters to position for the width. Enter number of blisters for cutoff.
- **Seamless Integration:** The assembly seamlessly integrates with both new and existing equipment, allowing businesses to enhance their production capabilities without machine modifications.
- **Precision Cutting:** Equipped with shear cut knife assemblies, the system achieves precise cutting of blisters, ensuring consistent quality and accurate sizing.
- **Enhanced Safety:** The custom assembly incorporates clear safety covers, enabling product flow through the knife assembly while maintaining a safe working environment for operators.
- **Operational Alerts:** The integrated light tower provides visual and audible alerts, keeping operators informed about the system's status and ensuring smooth operations.
- **Adjustable and Durable:** All components are securely mounted on a 12.7mm thick aluminum plate, further reinforced by an adjustable equipment stand with a hand crank for added convenience and stability.

"Eliminating the need for tooling to cut blister cards to size is a significant breakthrough in how blister cards are made and processed," says Andrew Zucaro, President of AZCO Corp. "We are proud to provide a solution that addresses the industry's need for precision, efficiency, and safety. Our custom assembly empowers businesses to streamline their operations and achieve exceptional quality control."

AZCO Corp. remains committed to innovation and customer satisfaction, continually striving to deliver cutting-edge solutions that reduce time and cost.
