SUR-PAK model VIP-100

Fairfield, NJ—AZCO Corp.'s *SUR-PAK model VIP-100* is a motor-fed precision cutting machine.

It is designed to cut and dispense a wide variety of materials of varying thickness fed from a continuous web—if you are dispensing desiccant, oxygen absorbers, food packs, or promotional items, this unit is the ideal solution.

With the purchase of an AZCO Corp. dispenser, operators have the freedom of choice to use any brand or type of material, providing a return on investment in weeks, depending upon production.

In today's competitive environment, no one wants to be restricted to using only one source of supplier, and the *SUR-PAK model VIP-100* provides enough flexibility to offer competitive pricing or to change the kind of material running through the equipment.

The latest design includes a timing screw, ensuring controlled and accurate insertion into bottles at a speed of 200 cycles per minute.

The unique cantilever design of the *SUR-PAK VIP-100* allows for easy cleaning and servicing, even offering toolless product changes in 90 seconds, with knife replacement achieved in 60 seconds.

The unit requires 110 VAC, 50/60 Hz, single phase, and a 30-90 PSI [2-6 bar] supply of compressed air.

Since AZCO puts all of its efforts into designing and manufacturing equipment, customers benefit from the latest innovations in dispensing.

AZCO Corp.'s experience and knowledge in working with many different materials, in many types of applications, makes it the best choice to provide technical and equipment support.

*AZCO is ISO 9001:2008 Certified.*
