News Article:

AZCO Corp.'s automatic sheeter for slip sheets reduces your cost by 20% compared to using pre-cut sheets. It can accommodate any material - corrugated, kraft, plastic, or anti-slip paper - without any changeover. Compact in size, the roll is found outside of the safety cage. With this optimal safety feature, increased throughput is achieved, since the process is continuous upon changing each new roll.

Easy to use, this on demand approach can be incorporated into any robotic palletized system, and no integration is required. Plug directly into 110vac and 40psi air supply. Once a sheet has been removed, the unit will automatically replace the sheet with another. It is that simple. The slip sheet can then be used to provide stabilization of boxes, bags, cartons, glass, or plastic packaging.

Available options include slitter station, eye registration, no product sensor, low product sensor, and static eliminator.

AZCO Corp. is an ISO 9001:2008 certified company with over 30 years experience developing solutions for a wide range of feeding and cutting applications. They offer cutting edge, field proven systems and components that are easily adapted to meet the needs of the most complex applications. AZCO Corp. will provide the most efficient and cost effective solution for you.
