AZCO Corp's SUR-PAK™ Pouch Dispenser is designed for ease of use and reliability. The unit comes on an adjustable height stand with castors for easy integration into packaging lines. The unit is self-threading and will feed, cut and place the pouches directly into your product or packaging line. The sachets or pouches can be either in roll form or continuous bandolier form. The SP-4D dispenses pouches up to 89 mm/3.5" wide and 6 mm/0.25" thick at speeds of up to 100 pouches per minute. It incorporates a guillotine cutter and uses compressed air to drive the knife. It is ideal for narrow, limited space applications.

Typical products used with this unit are desiccants, ingredient pouches for food products, overwrapped medical components, household components, and promotional materials. A dual tractor drive system increases reliability, ensuring constant contact with the product at all times without crushing or damaging the product. A color touch screen makes setting up operations and monitoring the unit easy.
