SPECIAL SECTION: DESIGN & MANUFACTURING

2D Barcode positively ID products

This 2D barcode holds up to 703k of secure, encrypted information. By incorporating

the HD Barcode into printed materials, such as cartons, labels, or containers, any firm can positively identify their products instantly from anywhere without Internet hookup. The barcode can be custom configured to provide each manufacturer a unique private version of the code. Security features include a separate code generator program, which is sequestered from the readers, ensuring that it can never be reproduced.

Medium-Pitch Milling Cutter optimized for lower-hp machines

Expanded Xtra-tec F4045 milling cutter line now includes a model with a medium pitch for use on lower horsepower machines and for difficult-to-fixure workpieces. The medium pitch allows the tool to deliver optimum performance in conditions of limited stability. Cutter features negative inserts with 14 cutting edges, 7 per side. (Editor's Note: This item was described incorrectly in a previous issue).

Cut-to-Length Assembly feeds, cuts & counts pieces

Sur-Size cut-to-length assembly handles a wide variety of flexible materials. It combines a knife assembly with a roll feeder to automatically feed,

cut, and count pieces. An end-of-cycle signal is provided once the cuts are completed. For an automated one-shot process, the unit will feed and cut the material on demand.

It Makes Straddling Pallets A Thing Of The Past!

Introducing The UniLift™
By Bishamon

UniLift

The UniLift, with deployable outrigger technology does the job of several products!

- ✓ lift a standard GMA pallet without straddling it
- ✓ transport it to a work area
- ✓ ergonomically position the load
- ✓ efficiently feed a production line

Replace cumbersome straddle stackers or even fork trucks in many applications!
