# Azco: Adjustable module stands

Azco's heavy-duty module stand is designed so that equipment as heavy as 1,000 lbs. can be easily mounted on to it.

A totally enclosed telescoping stand is rigidly constructed so there are no exposed mechanisms. The stand column is made from clear anodized aluminum with a steel weldment base. The base has leveling screws and castors for easy setup. There is an adjusting screw with a hand crank for height adjustments from 800mm/31.5 in. to 1200mm/47.2 in. Optional cantilever design is available.

The column comes with holes for equipment mounting. An optional motorized version is available, along with an encoder hand wheel for setting heights to repeated distances. Optional mounting plates along with XY axes are also available.
