

## SIMPLICITY AT ITS BEST

When the sensing application is simple, the solution should be too.

**THIS IS SICK**  
Emroc intelligence.

# Azco: Compact slip sheet inserter

Able to accommodate any material - corrugated, kraft, plastic, or anti-slip paper – without any changeover, Azco Corp.'s automatic sheeter for slip sheets is said to help reduce cost by 20% compared to using pre-cut sheets.

## By Gretchen Edelbrock, Products Editor

Compact in size, the roll is found outside of the safety cage. With this optimal safety feature, increased throughput is achieved, since the process is continuous upon changing each new roll.

Easy to use, this on demand approach can be incorporated into any robotic palletized system, and no integration is required. The inserter plugs directly into 110vac and 40psi air supply.

Once a sheet has been removed, the unit will automatically replace the sheet with another. The slip sheet can then be used to provide stabilization of boxes, bags, cartons, glass, or plastic packaging.

Available options include slitter station, eye registration, no product sensor, low product sensor, and static eliminator.
